Wise Randriamialison

Senior Frontend Engineer

randriamialisonwise@gmail.com · LinkedIn · GitHub · wiserandr.github.io/portfolio

SUMMARY

Senior frontend engineer with 8+ years building web and mobile products with React, React Native, Next.js and TypeScript. Led a team of 5 engineers on a ride-hailing platform used by 50,000+ riders and drivers, and the rebuild of a legacy PHP store in Next.js. Comfortable across the stack, from API design to deployment. Open to fully remote, full-time or contract roles.

SKILLS

Frontend:	React, Next.js, TypeScript, JavaScript, Redux, responsive design, UI performance
Mobile:	React Native, Expo, offline-first data, Google Maps Navigation SDK
Backend and cloud:	Node.js, NestJS, REST APIs, Redis, MongoDB, PostgreSQL, Stripe, Docker, AWS, Vercel

EXPERIENCE

Lead Frontend Engineer (Part-time), **COMIN** · France · Remote — 2024 – Jun 2026

- Led a team of 5 engineers delivering a ride-hailing platform (rider and driver apps in React Native, a NestJS API and an operations dashboard) used by 50,000+ riders and drivers.
- Reworked the real-time architecture after apps froze and driver positions jumped: moved live driver locations to Redis and queued payments and ride requests, stabilising the apps during rides; ride completion rate reached 55%.
- Integrated the Google Maps Navigation SDK into the driver app, keeping drivers in the app for the whole ride and letting the SDK handle rerouting at no extra cost.
- Created a shared private module installed by both apps for consistent design and features, standardised state on Redux, and split the start-up session check into smaller sequential requests to cut loading time.
- Built and maintained the operations dashboard, worked on Stripe payments, and took the product live with the owner.

Frontend Engineer (Contract), **Marlow Navigation** · Cyprus · Remote — 2022 – May 2026

- Built features for a React Native and TypeScript app used by seafarers and captains (sailing documents, payslips, voyage agendas, allotments, crew admin), shipping continuous releases with API teams, product and QA.
- Made the app work offline at sea by caching every GET request, queueing selected actions until the connection returned, and storing documents in app-private storage with automatic clean-up.
- Proposed a middleware API between the app and Marlow's many services, which the team built and adopted as the app's single, secure entry point.

Frontend Engineer, **FLYDESK** · Hong Kong · Remote — 2021 – 2022

- Delivered and maintained applications for international clients with distributed teams.

Frontend Engineer, **Opcadia** · France · Remote — 2020 – 2021

- Led the rebuild of a legacy PHP study-plan store as a self-service Next.js e-commerce platform, delivered within 6 months: scoped the project, chose the architecture, designed the core flows, split the work and reviewed code.
- Replaced a manual validation step with instant course previews built from cached data served by Next.js API routes, plus live enrolment status for customers.
- Improved SEO with statically rendered pages and ran a big-bang cut-over to Vercel, keeping the new site out of search indexes until launch.

Frontend Engineer, **Santosha Consulting** · Madagascar — 2018 – 2020

- Delivered multiple frontend projects with React and Angular.

Software Engineer, **ETech Consulting** · Madagascar — 2017 – 2018

- Built frontend features with React and Angular, and web apps with Symfony and WordPress.
